EDUCATION

Georgia Institute of Technology
MS Computer Science Ongoing

University of California,
Santa Barbara
BS Statistics & Data Science 2020

TECHNOLOGIES

Cloud Infrastructure

Compute: EKS, AKS, GKE, EC2

Data/AI: Azure OpenAI, RDS, BigQuery, S3

Security: Okta, IAM,
Entra ID,
VNet, VPC

Observability: Prometheus,
Grafana,
OpenSearch,
Cloud Monitoring

AI/ML

- RAG Architectures
- MCP Tooling
- LLM Security & Guardrails
- Prompt Engineering
- Vector Search

Cloud Security & Identity

- Managed Identities
- Private Link/Endpoints
- Network Isolation
- Compliance-driven architecture

DevOps/Infrastructure

Kubernetes	Docker
Helm	Terraform
Jenkins	CI/CD Pipelines

Data & Streaming

PostgreSQL	Cassandra
Apache Kafka	Databricks
ETL/ELT Pipelines	

Languages

Python	JavaScript
SQL	Bash
HTML/CSS	R

EXPERIENCE

C3 AI Redwood City, CA
AI Solutions Architect Jul 2024 – Present

AI Solutions Architect

- Reduced cloud spend by 20% and increased utilization by 18% by re-engineering instance sizing (16-core → 32-core) and optimizing OpenSearch shard strategies.
- Scaled OPC-UA node capacity by 10× by architecting a low-latency ingestion platform for a national electric utility, meeting a 10-second SLA.
- Cut search warrant generation time from hours to minutes by leading the pilot of an AI-driven system for law enforcement under strict LLM security and CJIS constraints.
- Reduced platform downtime and developer toil by engineering three internal MCP tools integrating OpenSearch and Prometheus for automated observability.
- Led CJIS 6.0 compliance and GovCloud migrations by coordinating Legal, InfoSec, and Cloud Ops teams across Azure and AWS deployments.
- Improved PostgreSQL (AWS RDS) performance and reduced operating costs by optimizing query patterns, indexing strategies, and resource allocations.
- Standardized data-sharing across 9 applications by leveraging Azure-native mechanisms, reducing integration complexity and eliminating SAS token dependencies.
- Accelerated enterprise pilots from POC to production by authoring compliant hosting models and consumption forecasts, supporting contract finalization.

TransUnion Remote
Solutions Architect Oct 2021 – Jul 2024

Solutions Architect

- Led end-to-end implementation of multi-touch attribution products for 5 enterprise clients, achieving 4.0+ CSAT scores and driving consistent contract renewals.
- Engineered Python-based internal tooling to automate data validation, QA, and reporting, improving delivery efficiency across major accounts.
- Developed a database-relationship visualization tool (Graphviz) to streamline architectural reviews and technical onboarding.

Tawa Services, Inc. Buena Park, CA
Financial Analyst Jan 2021 – Oct 2021

Financial Analyst

- Developed a multi-label NLP ticket classifier (85% accuracy) to categorize 1,000+ customer requests, significantly improving response routing.
- Architected an ETL pipeline to aggregate e-commerce data sources, automating reporting for key stakeholders.

PROJECTS

Regression Modeling & Prediction of Used Car Prices apang782.github.io/vroom2

Regression Modeling & Prediction of Used Car Prices

- Found torque, horsepower, and city MPG as the most important predictors of list price during decision tree, linear modeling, and ensemble method development.
- Predicted 218 car prices with \$2400 margin of error using random forest model.
